

Microsoft 365

## eperi Cloud Data Protection for Microsoft 365

**Cloud applications are the focus of attackers. With eperi Cloud Data Protection, your data is worthless in case of data theft.**

Microsoft Office Suite solutions are among the most widely used applications by businesses worldwide. With Microsoft 365, these applications move to the Cloud, enabling you to collaborate seamlessly and easily at scale with colleagues and customers around the world. The question is, how secure is the Cloud? Is data protection guaranteed within the framework of compliance requirements with regard to the GDPR?

Anyone who encrypts your data has access to your sensitive and personal data. (With BYOK and HYOK also the Cloud provider).

Not the Cloud provider, but each company is independently responsible for compliance with the GDPR.

Only with Technical and Organizational Measures (TOMs) that are independent of Microsoft is Microsoft 365 GDPR compliant.

### YOUR ADVANTAGES

- > Fast and easy to implement
- > Flexible Template architecture
- > Solution can be used “out of the box” - thanks to preconfigured Template
- > Transparent Gateway concept: no installation on user or SaaS side. The end user does not notice any difference
- > All Microsoft 365 applications can be used smoothly, in the usual way
- > Critical data leaves your company only in unreadable form. The data is worthless to unauthorized parties
- > You have sole control over and access to your data
- > Central compliance management reduces the risk of unauthorized data access
- > Data protection in all lifecycles: data-at-rest, in-transit and in-use
- > Save money with security solutions that are no longer needed

With eperi Cloud Data Protection for Microsoft 365 you are on the safe side. The eperi Gateway offers an ideal complement to the Microsoft 365 product's own security and data protection features.

Key management and encryption are performed exclusively under the control of your own company. Critical data is encrypted before it leaves the company and is transferred to the Cloud. Not only do you protect your data, but you also meet internal and external compliance requirements.

## The eperi Gateway

**Nobody can prevent data from being stolen; but with the eperi Gateway you prevent the stolen data from being used.**

The eperi Gateway is the basis of the eperi Cloud Data Protection solutions. It is connected as a transparent layer between Microsoft 365 and the company's own infrastructure.

The flexible Template architecture is an integral part of the Gateway. The Templates are XML files that describe which data in the data stream should be encrypted or tokenized, tailored to your individual needs. You can integrate further Templates, for example for Salesforce, SAP SuccessFactors, your own applications as well as other SaaS and web applications into the eperi Gateway at any time.

### Supported applications

- > Mail
- > Calendar
- > Teams
- > OneDrive
- > SharePoint

### Function support

- > Search and sort
- > Auto Discover
- > Exchange – Hybrid
- > Migration
- > Without plugins

## Do not compromise!

The eperi solutions can be quickly integrated into existing IT infrastructures without changing them. End users use the applications in the usual way without any functional restrictions (search, sort, etc.).
